

Multiplication Tables Check (MTC)

The **Multiplication Tables Check (MTC)** will be administered to children in Year 4, starting in the 2019-20 academic year.

The purpose of the MTC is to determine whether Year 4 pupils can recall their multiplication tables up to 12x12 fluently as outlined in the National Curriculum.

Children will be tested using a computer, where they will have to answer multiplication questions against a clock. The test will last no longer than 5 minutes; children will have 6 seconds to answer each question in a series of 25.

A sound recall of times tables will form a strong foundation for all maths learning that follows especially in the lead up to Year 6 SATS.

The aim of this booklet is to show you some of the strategies we use in school and that you could try at home to help your child with their tables.

We hope you find it useful!

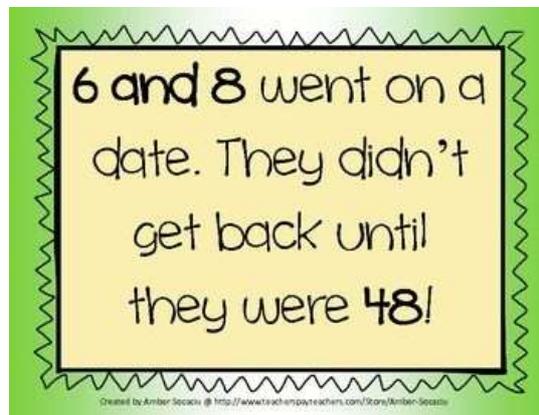

Rhyme Time!

Silly rhymes and songs can help children to remember these patterns, e.g. '0 2 4 6 8, my mum thinks I'm great' – the sillier the better really!

$3 \times 3 = 9$	Swing from tree to tree on a vine, three times three is nine.
$7 \times 7 = 49$	Seven times seven is like a rhyme, it all adds up to 49.
$8 \times 8 = 64$	He ate and ate and was sick on the floor, eight times eight is 64.

You can:

- See if, together, you can think of a silly rhyme to go with the first few numbers in each table: '**5, 10, 15, 20 ...**'

Number Squares

When numbers are placed in a number square, highlighted times tables make a visual pattern. Some children find these very visual patterns help them to remember the table.

Here is a number square with the 3 times table highlighted.

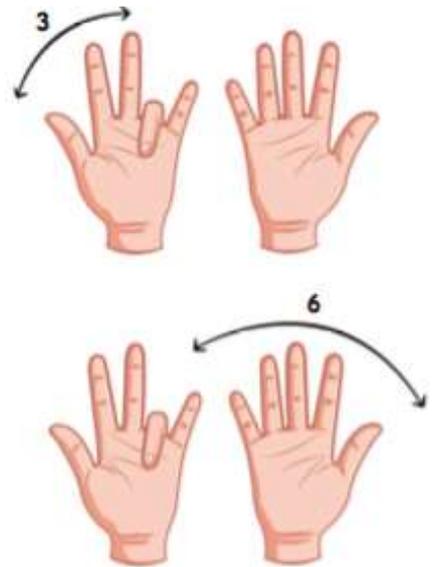

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
21	22	23	24	25	26	27	28	29	30
31	32	33	34	35	36	37	38	39	40
41	42	43	44	45	46	47	48	49	50
51	52	53	54	55	56	57	58	59	60
61	62	63	64	65	66	67	68	69	70
71	72	73	74	75	76	77	78	79	80
81	82	83	84	85	86	87	88	89	90
91	92	93	94	95	96	97	98	99	100

You can:

- Print the 3 times table number square and stick it somewhere in your house, where your child will find it easy to read for a few minutes a day. Encourage them to read to 12×3 a few times and then close their eyes and see how much they can recall.
- Print off a plain number square to explore. With your child, choose a times table for them to highlight with a coloured pencil or highlighter pen. See if they can see a pattern appearing. Now practise the times table as above.

9 Times Tables on your Fingers!

1. Hold your hands in front of you with your fingers spread out.
2. For 9×4 bend your 4th finger down (like the picture).
3. You have 3 fingers in front of the bent finger and 6 after the bent finger. Thus the answer must be 36!
4. The technique works for the 9 times table up to 10.

You can:

- Explore with your child which method helps them most with the 9 times table – the more physical hand trick, or the more visual exploration of number patterns.

One Less Equals Nine!

This is another strategy for learning the 9 x tables. The key to it is that for any answer in the nine times table, both digits add up to 9. Try it and see!

1. Subtract 1 from the number you are multiplying by. E.g. 7×9 , one less than 7 is 6.
2. This number becomes the first number in the answer. $7 \times 9 = 6_$
3. The two numbers in the answer add up to 9 so the second number must be 3. $7 \times 9 = 63$

You can:

- Investigate this theory with your child by exploring this rule and finding more patterns. This will familiarise your child with the 9 times tables.

Double, Double!

A quick trick for learning the fours is just to double, double. Double the number and then double it again.

For example;

3 x 4 double 3 is 6, double 6 is 12

5 x 4 double 5 is 10, double 10 is 20

6 x 4 double 6 is 12, double 12 is 24

9 x 4 double 9 is 18, double 18 is 36

You can also use doubling to help with learning the 6 times table once you know the 3 times table.

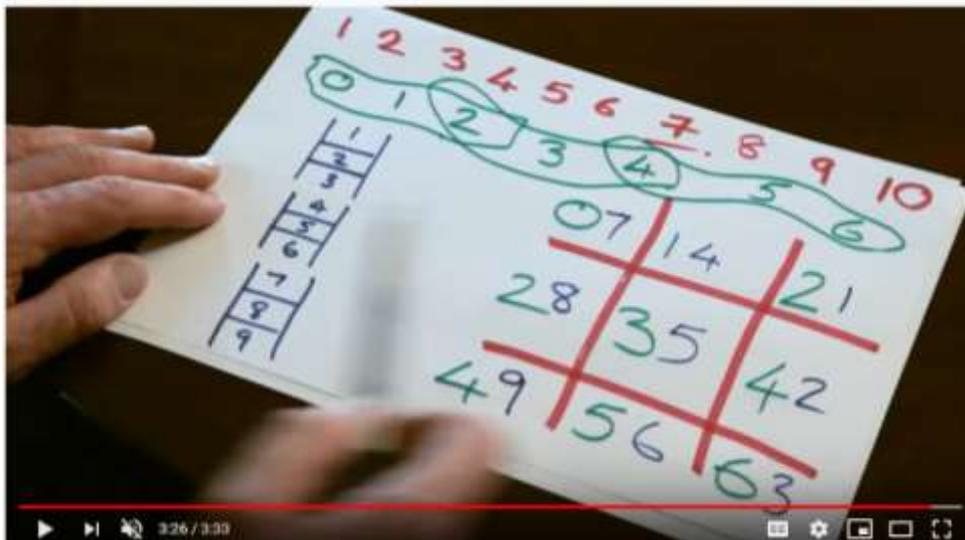

3 x 6: if you know $3 \times 3 = 9$, then you can double it to give 18

Another doubling trick is for the eights: double, double, double! Double the number, double it again and then double it again!

7 Times Tables Trick

<https://www.youtube.com/watch?v=6TWuOvN-4jk>

This clip shows you a way of using 'snakes and ladders' to create a noughts and crosses style board showing the multiples of 7.

Speed Tables!

Time challenges can be a really good way of helping times tables become automatic. Some ideas we use in school are;

- measuring the time it takes to write the tables, then trying to beat the time.
- seeing how many times you can write that table in 1 minute.
- race/challenge against other people

Games to play at home

Super Fingers!

This is a game for two players!

The game is basically a version of rock, paper, scissors but with numbers. Two players count to 3 and then make a number using their fingers.

Both players then have to multiply both numbers together and the quickest wins.

Multiplication Snap

You will need a deck of cards for this game.

1. Flip over the cards as though you are playing snap.
2. The first to say the fact on the cards turned over (2 and 3 say 6) gets the card.
3. The person to get all of the cards wins.

Bingo!

This game will need 2 players!

Make a grid of six squares on a piece of paper and ask your child to write a number in each square from the target tables. Give them a question and if they have the answer, they mark them off. First one to mark off all their numbers is the winner!

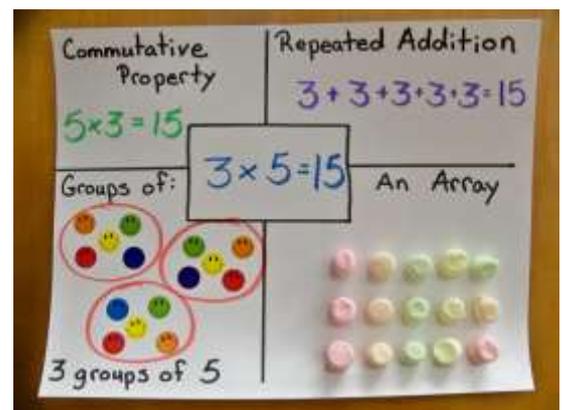

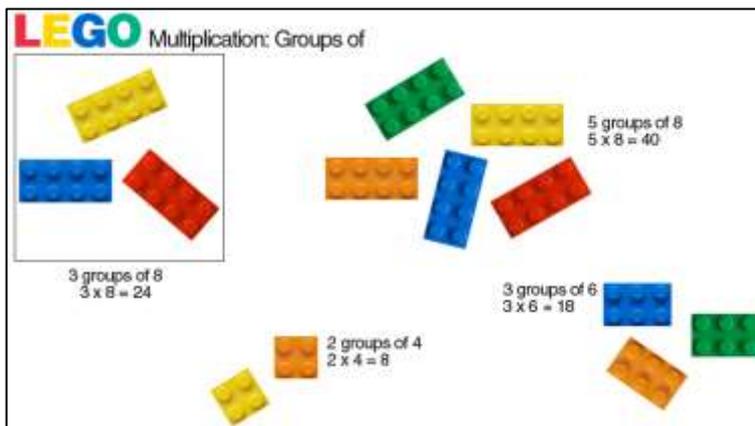

You can:

- Turn these into family games and include a reasonable reward/incentive to entice your child.
- Adapt other games to focus on multiplication tables, or create some totally new tables games with your child.
- Start the game by giving children a copy of the times table to refer to if they need it. Then, when they're ready for the challenge, they can try the game without.

Concrete Pictorial & Abstract Approach (CPA)

Manipulation of physical resources and construction of pictorial representations before conquering the abstract understanding of times tables is extremely valuable. Multiplication has a strong presence in our day-to-day life. Look for opportunities to use them when problem-solving when shopping or using recipes. In order for maths experiences to be effective children need to be able to work with and manipulate practical materials.

You can:

- Organise a multiplication array hunt. Exploration of arrays will increase your child's understanding of multiplication.

Useful Websites

1. Maths Frame Multiplication Tables Check

<https://mathsframe.co.uk/en/resources/resource/477/Multiplication-Tables-Check>
Timed tests that mirror the multiplication tables check.

2. Timestables.co.uk

<https://www.timestables.co.uk/6-times-table.html>
A range of tests for specific or all the times tables.

3. Topmarks.co.uk

<https://www.topmarks.co.uk/maths-games/7-11-years/times-tables>
Various games that can be adjusted to specific times tables.

4. Tablestest.com

<https://tablestest.com/>
Multiplication grid test that records the time taken for each question.

5. Transum.org
